

CONFIDENTIAL

MINUTES FROM NOV 1953

[REDACTED] MEETING

25X1

529-AB

*Timing  
device,  
clockwork-  
24 hr.*

The question was raised whether the two prototypes sent by New Haven Clock to Thomaston were satisfactory. This is to be made a matter of record. It was reported that the adapter for the clock work was started. [REDACTED] agreed that the unit should be equipped with a positive starter. [REDACTED] is to submit a complete report on the Sandvik spring. Lubricating tests on two different type lubrications and a non-lubricated movements are to be conducted. A complete report will be submitted. The details for the extensive twenty-four hour test program is to be made more specific. The specifications, drawings and acceptance standards are to be initiated. An instruction sheet for the Feder is to be submitted. The polyethylene tape for sealing the box is to be tested and returned to [REDACTED]. The results of these packaged tests are to be submitted. The "promising packaging method" indicated in our report is to be reported in more detail. The timing tests on the clock work are to be treated statistically. Reliability tests are to be run on the clock work from the mechanism through to the primer.
